

May 21, 1937

July 1  
Mr. Franklin C. Hansen  
Boulder, Utah

Dear Sir: REL: BOULDER-DEER CREEK  
DISTRIBUTION

Water users on Boulder creek in Deer creek system in Garfield county, have asked me for the appointment of a Water Commissioner to distribute the water of said system for the 1937 season.

Checking the files I find you have not submitted a report as Water Commissioner on the distribution for 1936. I am wondering, therefore, if you would prepare, at once, a report of your activities and stream flow measurements, together with recommendations you may have to offer the State Engineer and the water users for the improving of the present system of irrigation, measuring devices etc. Such report should show some of the major problems you had to meet in distributing the waters of said system, how these problems were met and the results, together with the measurements made of the water diverting from the various canals. I find a report of this kind is always more easy to understand if it be accompanied by a small map showing the geographic location of the various ditches referred to, measuring devices etc.

Yours very truly,

T. H. Humpherys  
STATE ENGINEER
